

# Maximizing the Effectiveness of Water Quality Data Collection & Dissemination

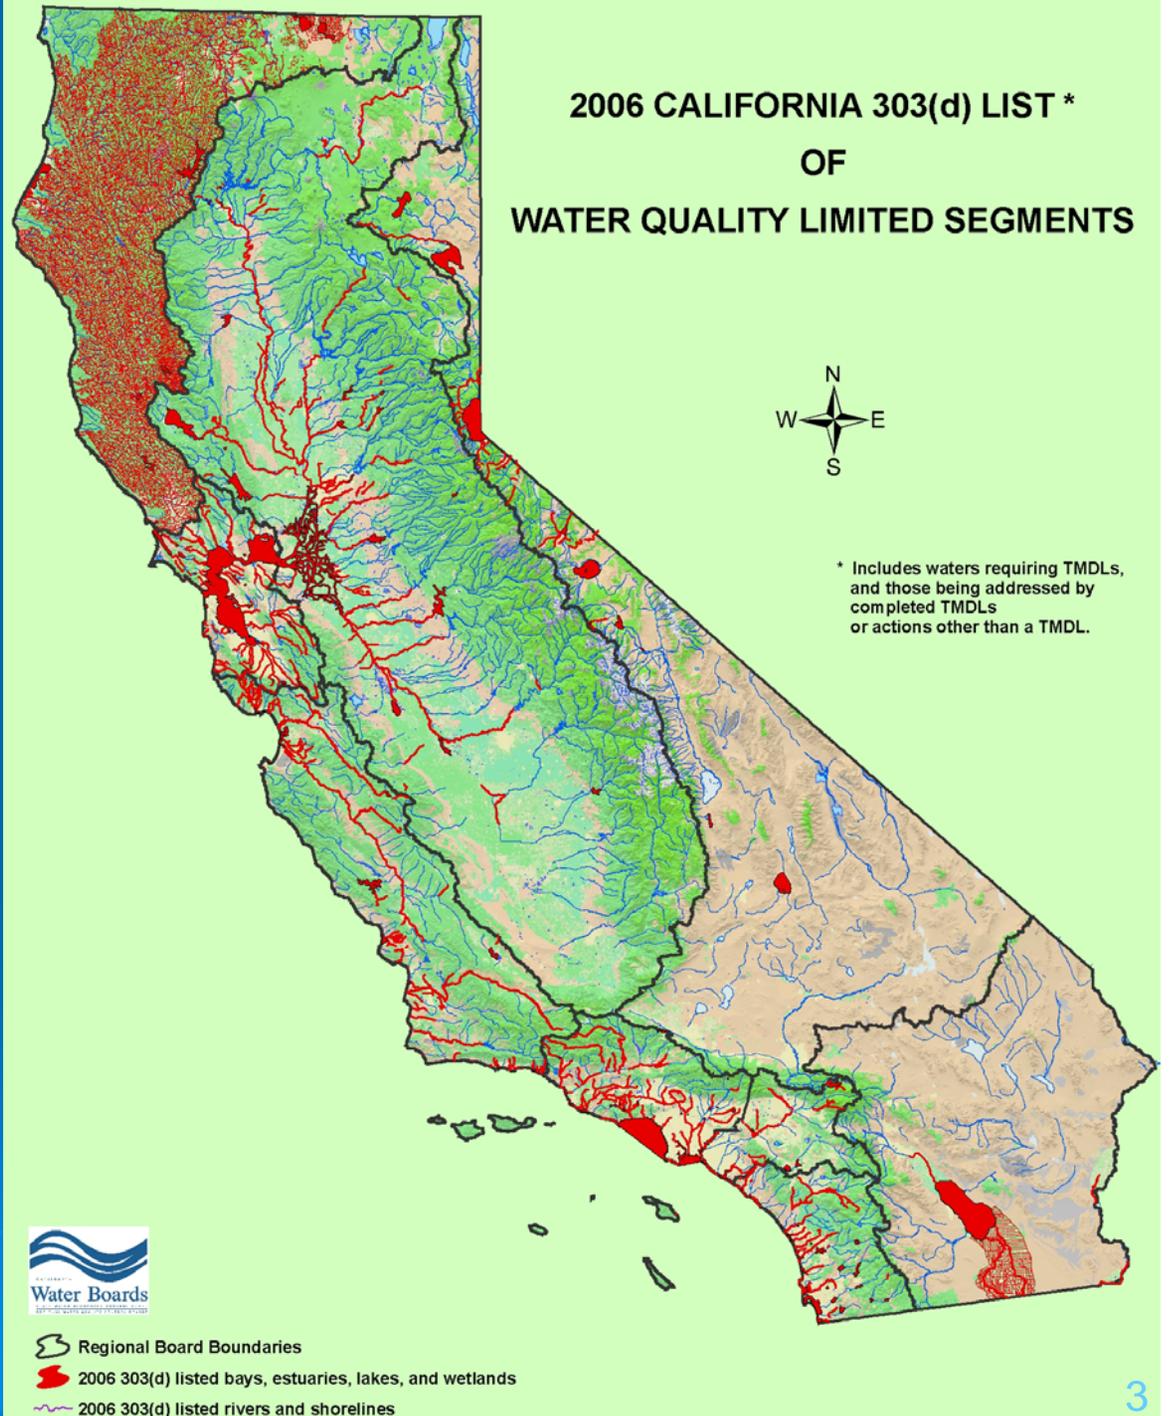

Jon B. Marshack, D.Env.  
Monitoring Council  
Coordinator  
State Water Resources  
Control Board

# Everyone Needs Data

- 💧 211,000 miles of rivers & streams
- 💧 1.6 million acres lakes
- 💧 1,100 miles of coastline
- 💧 1.3 million acres of bays and estuaries
- 💧 15 million acre-feet of groundwater extracted per year

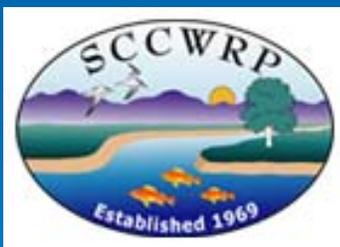

# The Water Quality & Ecosystem Information Problem

# The Response – Senate Bill 1070

- 💧 Became state law in 2006
- 💧 Required formation of California Water Quality Monitoring Council
- 💧 Memorandum of Understanding between
  - 💧 California Environmental Protection Agency
  - 💧 California Natural Resources Agency
- 💧 By December 1, 2008:  
Monitoring Council recommendations
  - 💧 Maximize efficiency and effectiveness of existing water quality data collection and dissemination
  - 💧 Ensure collected data available to decision makers and public
- 💧 Comprehensive Monitoring Program Strategy for CA

# Monitoring Council Members

# The Monitoring Council's Solution

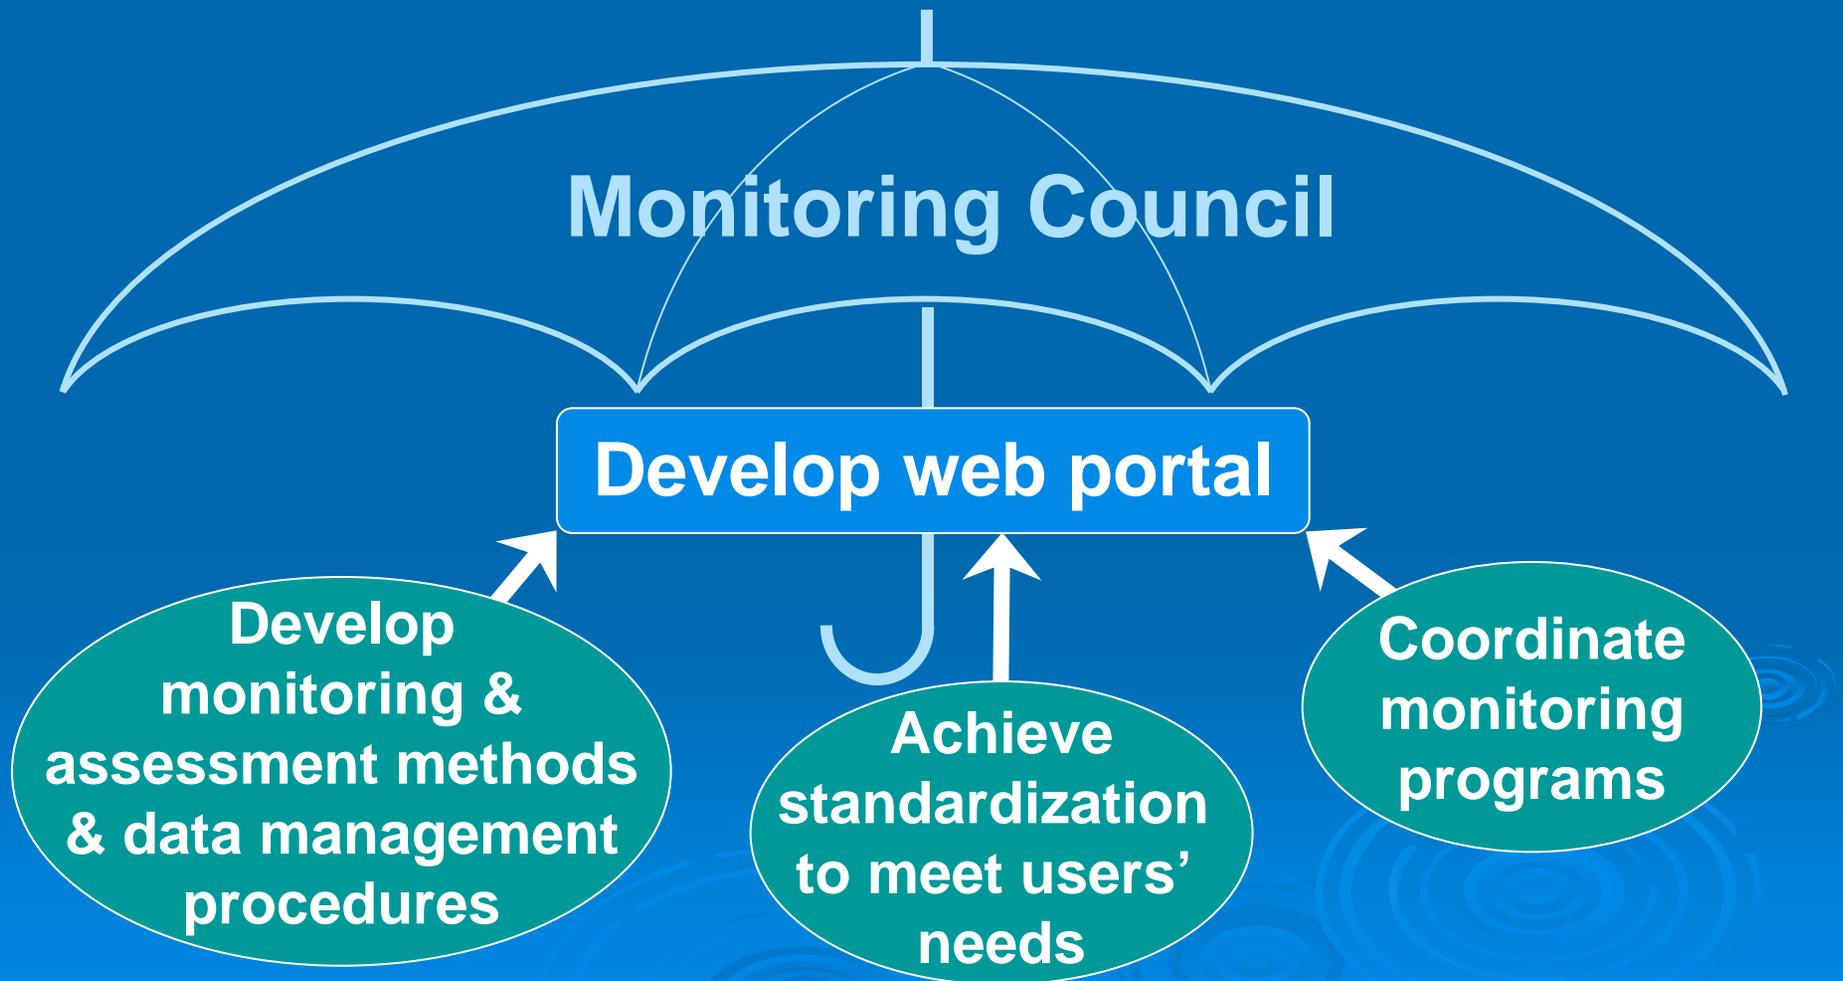

**Don't get mired in technical details!**

- 💧 Focus first on streamlined data access
  - 💧 Theme-based web portals
  - 💧 Directly address users' questions
  - 💧 Single global point of entry
- 💧 Theme-specific workgroups
- 💧 Overarching Monitoring Council guidance

# Theme-Specific Workgroups

Issue-experts represent key stakeholders

# Role of the Monitoring Council

- 💧 Establish policies and guidelines
- 💧 Clearinghouse for standards, guidelines & collaboration
- 💧 Resolve key issues
- 💧 Provide support
- 💧 Improve visibility

# My Water Quality Website and Portal Demonstration

[www.CaWaterQuality.net](http://www.CaWaterQuality.net)

The background of the slide is a solid blue color. In the lower right quadrant, there are several faint, concentric circular ripples, resembling water droplets or ripples on a pond, rendered in a lighter shade of blue.

Office of Governor  
Edmund G. Brown Jr.

## Welcome to My Water Quality

This web portal, supported by a wide variety of public and private organizations, presents California water quality monitoring data and assessment information that may be viewed across space and time. Initial web portal development concentrates on four theme areas, with web portals to be released one at a time. Click the [Contact Us](#) tab for more information.

The Monitoring Council seeks to provide multiple perspectives on water quality information and to highlight existing data gaps and inconsistencies in data collection and interpretation, thereby identifying areas for needed improvement in order to better address the public's questions. Questions and comments should be addressed through the [Contact Us](#) tab.

### IS OUR WATER SAFE TO DRINK?

Safe drinking water depends on a variety of chemical and biological factors regulated by a number of local, state, and federal agencies. [\[Future Portal\]](#)

### IS IT SAFE TO SWIM IN OUR WATERS?

Swimming safety of our waters is linked to the levels of pathogens that have the potential to cause disease. [More >>](#)

### IS IT SAFE TO EAT FISH AND SHELLFISH FROM OUR WATERS?

Aquatic organisms are able to accumulate certain pollutants from the water in which they live, sometimes reaching levels that could harm consumers. [More>>](#)

### ARE OUR AQUATIC ECOSYSTEMS HEALTHY?

The health of fish and other aquatic organisms and communities depends on the chemical, physical, and biological quality of the waters in which they live. [More>>](#)

## Which Beaches, Lakes, and Streams Are Listed as Impaired for Bacterial Indicators?

County:  Water Body:

Show county

This interactive map shows which of California's waters are listed as impaired for contact recreation related factors and which pollutants are involved. Also shown are potential sources of pollutants and the Total Maximum Daily Load (TMDL) projects to reduce pollutants to acceptable levels.

**View 2006 303(d) Listing and current TMDL Information:**

- Click on a water body (shown in red), or;
- Select (or type) the county in the County box, then select the water body from the Water Body menu, or;
- Select (or type) the water body name directly in the Water Body box.

**Impaired Water Bodies**

Listing a water body as impaired in California is governed by the [State Water Board's 303\(d\) Listing Policy](#).

Regional Water Boards assess water quality data for California's waters every two years to determine if they contain pollutants at levels that exceed protective water quality criteria and standards. This biennial assessment is required under Section 303(d) of the [federal Clean Water Act](#).

County:  Water Body:

Show county

This interactive map shows which of California's waters are listed as impaired for contact recreation related factors and which pollutants are involved. Also shown are potential sources of pollutants and the Total Maximum Daily Load (TMDL) projects to reduce pollutants to acceptable levels.

### View 2006 303(d) Listing and current TMDL Information:

- Click on a water body (shown in red), or;
- Select (or type) the county in the County box, then select the water body from the Water Body menu, or;
- Select (or type) the water body name directly in the Water Body box.

### Impaired Water Bodies

Listing a water body as impaired in California is governed by the [State Water Board's 303\(d\) Listing Policy](#).

Regional Water Boards assess water quality data for California's waters every two years to determine if they contain pollutants at levels that exceed protective water quality criteria and standards. This biennial assessment is required under Section 303(d) of the [federal Clean Water Act](#).

## Are the Problems Getting Better?

A number of programs address existing water quality problems that affect swimming safety.

### -> [Clean Beaches Initiative Grant Projects](#)

California is committed to improving and protecting beaches along its coast. Since 2001, California has invested \$100 million in Clean Beaches initiative grants to fund local projects that reduce bacterial contamination along the coast. The State has also funded research to develop more rapid detection methods for knowing when to post beaches, tracking the sources of contamination, and studies to better understand the relationship between bacterial indicators and incidence of disease.

### -> [Total Maximum Daily Loads \(TMDLs\)](#)

A Total Maximum Daily Load, is a regulation designed to improve water quality by controlling the amount of a pollutant entering a water body. Under the federal Clean Water Act, every impaired water body on the [303\(d\) list](#) is required to have a TMDL, designed to bring the water body back into compliance with water quality standards.

### -> [TMDLs that address Pathogens, Bacterial Indicators, and Swimming Safety.](#)

## Fecal Bacteria Source Identification Study at Campbell Cove State Beach, Bodega Bay

Campbell Cove State Beach, Bodega Bay is a popular beach for families, school field trips, kayaks, divers, etc. because of its beach being protected from the rough northern California surf and water temperatures often 10° warmer than the open coastline water temperatures. A year-round source of freshwater flows from the “Hole-in-the-Head” pond onto the beach that attracts a constant flock of sea gulls who like to drink from the creek. However, a phenomenon has been observed of elevated fecal bacteria contamination typically during the fall months that led to a Clean Beaches Initiative (CBI) Grant that should help lower the level of bacteria at the beach.

The County of Sonoma Environmental Health Division in cooperation with the North Coast Regional Water Quality Control Board, Bodega Marine Laboratory and California Parks and Recreation Department to date have ruled out the State beach’s vault privy (see attached photo) through extensive dye studies. The California Parks and Recreation Department has implemented a dog ban notice. The Bodega Marine Laboratory has completed one study phase of tidal circulation patterns in May 2003 and is conducting a second study the week of October 13-17, 2003. Results from the May 2003 tidal circulation study indicated: strong tidal circulation with high rate of flushing within Bodega Harbor including Campbell Cove and small area of tidal intake outside the harbor mouth limited to less than 300 meters.

The County of Sonoma contracted with Dr. Mansour Samadpour with the Institute for Environmental Health to conduct

## Welcome to My Water Quality

This web portal, supported by a wide variety of public and private organizations, presents California water quality monitoring data and assessment information that may be viewed across space and time. Initial web portal development concentrates on four theme areas, with web portals to be released one at a time. Click the [Contact Us](#) tab for more information.

The Monitoring Council seeks to provide multiple perspectives on water quality information and to highlight existing data gaps and inconsistencies in data collection and interpretation, thereby identifying areas for needed improvement in order to better address the public's questions. Questions and comments should be addressed through the [Contact Us](#) tab.

### IS OUR WATER SAFE TO DRINK?

Safe drinking water depends on a variety of chemical and biological factors regulated by a number of local, state, and federal agencies. [\[Future Portal\]](#)

### IS IT SAFE TO SWIM IN OUR WATERS?

Swimming safety of our waters is linked to the levels of pathogens that have the potential to cause disease. [More >>](#)

### IS IT SAFE TO EAT FISH AND SHELLFISH FROM OUR WATERS?

Aquatic organisms are able to accumulate certain pollutants from the water in which they live, sometimes reaching levels that could harm consumers. [More>>](#)

### ARE OUR AQUATIC ECOSYSTEMS HEALTHY?

The health of fish and other aquatic organisms and communities depends on the chemical, physical, and biological quality of the waters in which they live. [More>>](#)

Show County Info:   Show counties

Fish and shellfish are nutritious and good for you to eat. But some fish and shellfish may take in toxic chemicals from the water they live in and the food they eat. Some of these chemicals build up in the fish and shellfish - and in the humans that eat fish and shellfish - over time. Although the chemical levels are usually low, it is a good idea to learn about advisories and monitoring in water bodies where you fish, and for fish or shellfish you eat.

### QUESTIONS ANSWERED

- [Can I eat fish or shellfish caught in my lake, stream, or ocean?](#)
- [Does my lake, stream, or ocean location have fish or shellfish with contaminants at levels of concern?](#)
- [What are the levels and long-term trends in my lake, stream, or ocean location?](#)
- [Which lakes, streams, or ocean locations are listed by the State as impaired?](#)
- [What is being done to reduce these problems?](#)

Water Quality information addressing these questions is currently available for the counties that are shaded on this map. This **41**

## Can I Eat Fish or Shellfish Caught in My Lake, Stream, or Ocean Location?

County:  Water Body:

Show county

**Fish and Shellfish Consumption Advisories by Location**

There are health benefits from eating fish and shellfish. But, some fish and shellfish may contain chemical or biotoxin contaminants that could pose health risks. When contaminant levels are unsafe, consumption advisories may recommend that people limit or avoid eating certain species of fish caught in certain places and at certain times.

[California Sport Fish Consumption Advisories](#)

For a number of California water bodies, the Cal/EPA office of Environmental Health Hazard Assessment (OEHHA) publishes consumption advisories for chemicals in noncommercial fish which you and your family or friends catch.

**These advisories are shown on the map to the left.**

- Click on a water body (shown in **purple**), or
- Select (or type) the county in the County box, then select the water body from the Water Body menu, or
- Select (or type) the water body name directly in the Water Body box

**Contaminant Data**

This interactive map allows you to explore fish contaminant data for your fishing locations. Data from extensive monitoring of lakes and reservoirs by SWAMP are available for 2007 and 2008. Data from these two years are shown by default.

- Select parameters of interest from the menus below and click on the "Go" button. The map will display average concentrations for the selected water bodies.
- To view data for all species at your water body, trends, or comparisons with nearby water bodies, click on a map location or select a water body from the menu above the map.
- Enter your own threshold or modify thresholds displayed on the map by clicking the Change Thresholds link in the map legend.

## Which Lakes, Streams, or Ocean Locations Are Listed By The State As Impaired?

County:  Water Body:

Show county

This interactive map shows which of California's waters are listed as impaired for uses related to fish or shellfish consumption by humans and which pollutants are involved. Also shown are the Total Maximum Daily Load (TMDL) projects to reduce pollutants to acceptable levels.

### View 2006 303(d) Listing and current TMDL Information:

- Click on a water body (shown in red), or
- Select (or type) the county in the County box, then select the water body from the Water Body menu, or
- Select (or type) the water body name directly in the Water Body box
- Use the magnifier tool to zoom into an area of interest (more highlighted water bodies will appear)
- Click on the state outline tool to return to a statewide view

### Impaired Water Bodies

Listing a water body as impaired in California is governed by the [State Water Board's 303\(d\) Listing Policy](#).

The State and Regional Water Boards assess water quality data for California's waters every two years to determine if they contain pollutants at levels that exceed protective water quality criteria and standards. This biennial assessment is required under Section 303(d) of the [federal Clean Water Act](#).

## Safe to Eat Fish & Shellfish Pollution Sources & Health Risks

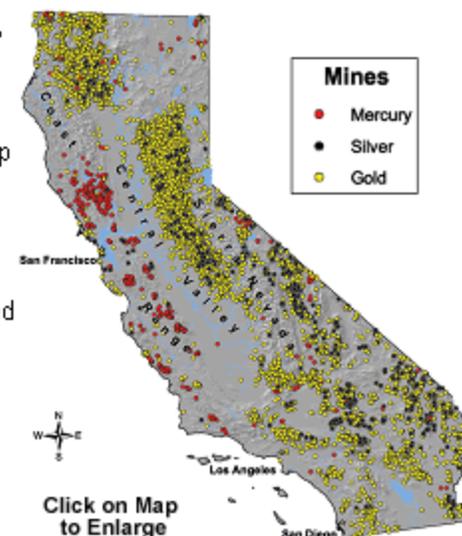

### What are the Sources of Fish and Shellfish Contamination?

Most California fish consumption advisories involve four primary contaminants: mercury, PCBs, DDTs, and dieldrin. These and other chemical contaminants persist for long periods in the environment. Persistent organic chemicals, such as PCBs, DDT, and dieldrin accumulate in fatty tissues. Mercury, on the other hand, accumulates primarily in muscle tissue. Levels of all of these contaminants increase as they are transferred up the food chain. For example, concentrations of mercury in top predators (such as largemouth bass) may be a million times higher than concentrations in water.

These pollutants originate from a number of past and present municipal, industrial, and agricultural sources, such as mercury and gold mining, pesticide use around homes and in agriculture, leaking electrical transformers, and chemical manufacturing.

The history of gold mining in California's Sierra Nevada Motherlode began with the Gold Rush of 1848/49 and is well known. Mercury, mined mainly in the Coast Range, was used to amalgamate the gold. Between 1848 and 1981, 88% of the mercury mined in the United States came from the northern Coast Range of California. The map on the right shows the historic extent of gold, silver, and mercury mining in California. Mercury contamination from mining activities persists to this day and contributes to the mercury that accumulates in fish. Other sources of mercury include emissions from the burning of fossil fuels and oil refining, the deposition of those atmospheric emissions, municipal and industrial wastewater discharges, and urban runoff.

### What are the Risks of Eating Contaminated Fish and Shellfish?

The amounts of chemicals found in sport fish in California are not known to cause immediate sickness. But chemicals can collect in the body over time and they may eventually affect your health or that of your children. Some of the adverse health effects that might occur from long-term exposure to high levels of toxic chemicals in fish include increased risk of cancer, damage to the developing nervous system in the fetus and in young children, and damage to the reproductive system.

Information for Fish Consumers:

- > [Methylmercury in sport fish](#)
- > [PCBs in fish caught in California](#)

### How Can I Reduce My Risks from Eating Contaminated Fish and Shellfish?

Fish and shellfish are an important part of a healthful diet. There are things you can do to help lower your chances of taking in

## Welcome to My Water Quality

This web portal, supported by a wide variety of public and private organizations, presents California water quality monitoring data and assessment information that may be viewed across space and time. Initial web portal development concentrates on four theme areas, with web portals to be released one at a time. Click the [Contact Us](#) tab for more information.

The Monitoring Council seeks to provide multiple perspectives on water quality information and to highlight existing data gaps and inconsistencies in data collection and interpretation, thereby identifying areas for needed improvement in order to better address the public's questions. Questions and comments should be addressed through the [Contact Us](#) tab.

### IS OUR WATER SAFE TO DRINK?

Safe drinking water depends on a variety of chemical and biological factors regulated by a number of local, state, and federal agencies. [\[Future Portal\]](#)

### IS IT SAFE TO SWIM IN OUR WATERS?

Swimming safety of our waters is linked to the levels of pathogens that have the potential to cause disease. [More >>](#)

### IS IT SAFE TO EAT FISH AND SHELLFISH FROM OUR WATERS?

Aquatic organisms are able to accumulate certain pollutants from the water in which they live, sometimes reaching levels that could harm consumers. [More>>](#)

### ARE OUR AQUATIC ECOSYSTEMS HEALTHY?

The health of fish and other aquatic organisms and communities depends on the chemical, physical, and biological quality of the waters in which they live. [More>>](#)

## Are Our Aquatic Ecosystems Healthy?

California has many types of aquatic habitats. Follow the links below to learn more...

### WETLANDS

Wetlands form along the shallow margins of deepwater ecosystems such as lakes, estuaries, and rivers. They also form in upland settings where groundwater or runoff makes the ground too wet for upland vegetation. [More >>](#)

### ESTUARIES

Estuaries are unique habitats found where rivers and the ocean mix. They feature a diverse array of plants and animals adapted to life along this mixing zone. [\[Future Portal\]](#)

### STREAMS, RIVERS & LAKES

California's streams and rivers flow through diverse habitats, from mountain canyons, valleys, deserts, estuaries and urban areas. Riparian woodlands develop along stream banks and floodplains, linking forest, chaparral, scrubland, grassland, and wetlands. California lakes, supporting deep water, wetlands, riparian woodlands, offer a quiet refuge for plants, animals and humans alike. [\[Future Portal\]](#)

### OCEAN

California has 1,100 miles of shoreline and 220,000 square miles of state and federal oceanic habitat, featuring one of the world's most diverse marine ecosystems. [\[Future Portal\]](#)

# Initial Portals

## IS IT SAFE TO SWIM IN OUR WATERS?

- Coastal beaches, bays & estuaries – July 2009

## IS IT SAFE TO EAT FISH AND SHELLFISH?

- Sport fish – December 2009

## ARE OUR AQUATIC ECOSYSTEMS HEALTHY?

- Wetlands – March 2010
- Streams & Rivers – under construction
- Marine Rocky Intertidal – under construction
- Estuaries – workgroup formed

## IS OUR WATER SAFE TO DRINK?

- At the tap, groundwater, surface water – Future

# Water Quality Monitoring Council's Monitoring, Assessment, & Reporting Matrix

WATER BODY TYPE	B E N E F I C I A L   U S E				Stressors & Processes
	Aquatic Ecosystem Health	"Swimmable"	"Fishable"	"Drinkable"	
Streams	SWRCB, SWAMP Healthy Streams Partnership				All Workgroups
Rivers					
Lakes					
Estuaries	Estuary Monitoring Workgroup				
Ocean Waters	Ocean Protection Council				
Wetlands	Wetland Monitoring Workgroup	N/A		N/A	
Groundwater	N/A	N/A	N/A		

# Opportunities and Benefits

- 💧 Deliver answers to the public
  - 💧 Underscore important work of agencies involved
- 💧 Provide framework to motivate and guide improvement
  - 💧 Reveal data gaps, lack of assessment tools, poor data integration, and other problems hamper statewide assessment
- 💧 Broader assessments possible through information sharing

# Opportunities and Benefits (cont.)

- 💧 Automate agencies' annual reporting
- 💧 Allow decision makers, legislators, and public understand how their dollars are spent
  - 💧 Beyond bean counting – Are conditions getting better?
  - 💧 Big picture status and trends
  - 💧 Access to information to guide future expenditures
- 💧 Collaboration improves efficiency of monitoring and assessment programs
- 💧 Transparency builds credibility
