

Background

- Within California many agencies, university groups, private entities and stakeholder entities collect large amounts of environmental data
- The many groups who collect monitoring data store them in different databases with inconsistent formats, Quality Assurance Quality Control (QA/QC), and data collection procedures.
- In many cases there is a great demand for this data to be available as a comprehensive, interoperable, and standardized data set by many different groups, decision makers.....
- CEDEN is a system designed to help provide environmental data as a compressively, interoperable and standardized data source

Principals of Data & Information Sharing Systems

- CEDEN**
CALIFORNIA ENVIRONMENTAL DATA EXCHANGE NETWORK
- ## Current Activities
- Implementation of the new California Environmental Data Exchange Network. (CEDEN) sharing architecture at the Regional Data Centers (RDCs)
 - Near future- development of a consensus base charter for CEDEN
 - RDC activities
 - CEDEN administration

Questions per Agenda

- **What kind of information and data types are supported by CEDEN** that could support the theme-based work group efforts?
 - CEDEN stores a wide variety of environmental data
 - Data types include ambient monitoring data about: fish, Bio-assessment, benthic, pesticides, nutrients, water quality, field monitoring, meteorological, hydrodynamic, habitat data, water quality data.....

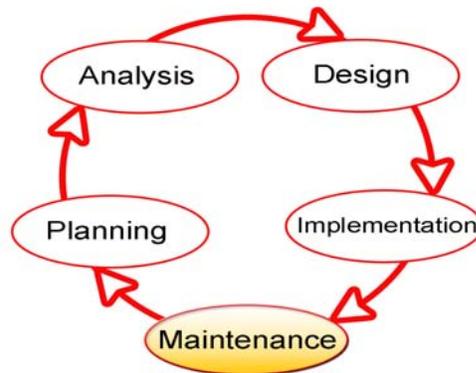

Questions Per Agenda

- What kind of information and data types are supported by CEDEN and BDAT **that could support the theme-based work group efforts?**
 - CEDEN is an environmental data infrastructure/conveyance system; it can produce data for MANY decision support processes;
 - Example would be developing a web application to answer, the CAWQMC sportfish sub-theme “Is it safe to eat fish and shellfish from our waters?”
 - Aquatic tissue data will be available in CEDEN to help answer this question

What kind of information and data types are supported by CEDEN and BDAT **that could support the theme-based work group efforts?**

- Follow Software
- Development
- Life Cycle
- SDLC

Questions Per Agenda

- What aspects of these systems can be used now?
 - SWAMP V2.5 client
 - Help Desk
 - SWAMP tools
 - Data transfer components
 - RDC resources
 - CEDEN data structures
 - Enter metadata into CERES
 - BDAT web page

Questions Per Agenda

- What features will be available soon and what is the time frame for future development?
 - CEDEN data on the web via the RDCs
 - Early march
 - CEDEN data flowing between the RDCs
 - Late February
 - CEDEN data flowing to the EPA Exchange Network and the NW states
 - This spring

Questions Per Agenda

- What features will be available soon and what is the time frame for future development?
 - A CEDEN web application in support of CAWQMC?
 - Budget permitting
 - This spring/summer

Questions Per Agenda

- What resources are available for system development?
 - Staffing
 - Contracted staff from Moss Landing Marine Labs (MLML)
 - RDC Staff
 - Funding
 - Some from SWAMP and a little more from the EPA;
 - This runs out at the end of this budget cycle
 - Potential funding from Prop 84, these funds are frozen

Questions Per Agenda

- Can these systems be used for statewide assessments and to help local monitoring programs to get meaningful data out?
 - YES!
 - Basic data availability on the web
 - Local applications to support community/regional monitoring, data management, aggregation, dissemination as data and information..... developed by the RDCs

Questions Per Agenda

- What additional players should be involved in a data management work group?
 - SWAMP Data Management Team, RDC representatives, strategic planner, Resources Agency CERES rep, ?, others as needed

Questions Per Agenda

- What level of detail is needed in shared data?
 - Allot
 - Each case needs to be considered independently to determine the best technological and institutional solutions to share data
 - NO Silver bullet
 - Process encounters mostly institutional issues
NOT technical
