Safe-to-Swim Portal

- Add inland beaches to Safe-to-Swim Portal
- Test version in late spring 2016
- Display both fecal coliform and *E. coli* data from CEDEN

Getting Data into CEDEN

- Querying existing information
- Communicating with other statewide groups for contact lists
- If you build it, they will come

Ultimately, want to have all available data displayed in portal for robustness.

Potential Guidance Documents

- Use existing Safe-to-Swim workgroup webpage for:
 - Standard Operating Procedures
 - Links to US EPA approved methods
 - List of standard methods
 - Links to other informational documents/videos
 - Methods comparison matrix?

Freshwater Bacterial Source Tracking

- Potentially internal (wiki)? i.e. lessons learned, tools
- Additional information/links provided on webpage

What's Next?

- Small workgroup meetings roughly bi-monthly
- Safe-to-Swim test version in late spring 2016 (hopefully)
- Input from the group? Interest in participating?
