EcoAtlas Advanced Performance Measures Reporting

November 6, 2018

Advanced Performance Measures Reporting

Project Objectives

- » Integrate project data and performance measures between EcoAtlas and Delta View
- » Develop new capabilities to improve performance measures reporting for wetland restoration projects

Tracking Performance Measures

- » Met with agency staff to discuss performance measure reporting needs
- » Determined information needed to enhance performance measures tracking and reporting
- » Modify Project Tracker to better track information and EcoAtlas to dynamically report on performance measures

Performance Criteria

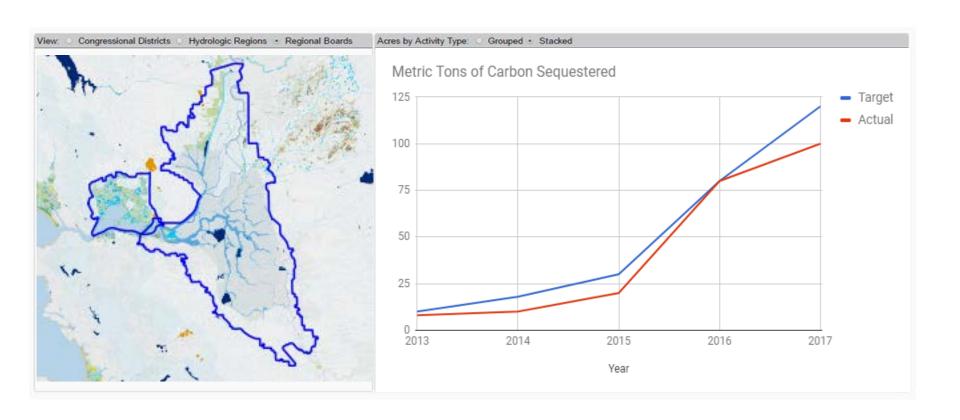

Status	Details	Evaluation Date
More than 50% criteria met	testing 2	2016-11-22
Less than 50% criteria met	testing	2015-01-01

Performance Measures

Plan Name	Plan Goal	Performance Measure	Measure Value	Status	Evaluation Date
Delta Plan	More Reliable Water Supply	Increased acre-feet of water protected or conserved per year to increase flow in periods of limited water supply	55 / 99 acres 56%	in-progress/partially achieved	2012-12-12

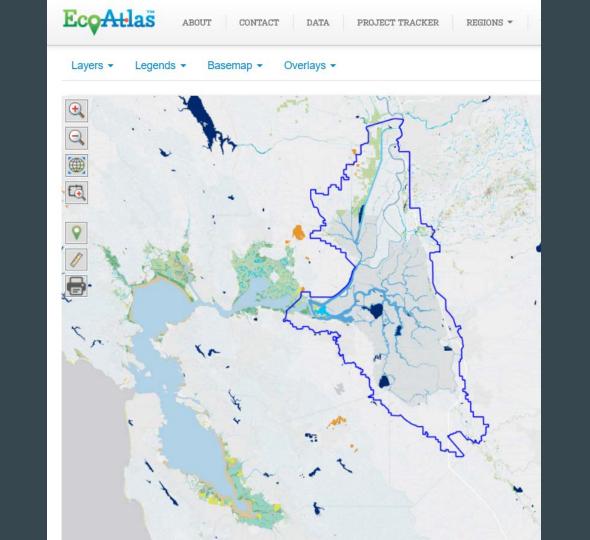

Delta Aquatic Resource Inventory (DARI)

Project Objectives

- Data compilation
- Coordination and DARI mapping SOP training
- Quality Assurance/Quality Control review
- Integrate DARI into EcoAtlas

Opportunity to Form Level 1 Committee

- DARI project provides opportunity to form Level 1
 Committee with federal and state partnerships (NHD, NWI)
- Opportunity for a comprehensive approach to track the abundance and distribution of wetlands in California
- Workgroup participants can expand over time to cover new data collection technologies

Data Compilation Stailable Data

- Compiled list of available data and the study purposes
- Developed schematic of project priorities
- In-progress of analyzing data according to schematic

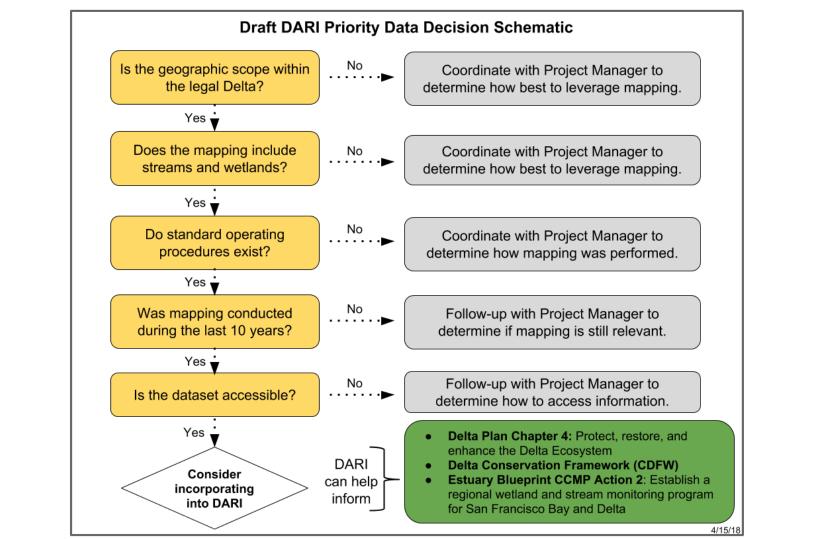

Level Data Collection

Level 3 Data Collection

Level 1 Committee -- DARI

Level 2 Committee -- CRAM

Level 3 Data Visualization

- Visualized available Level 3 data (CSCI, CEDEN, CalVEG)
- Developed protocol for visualizing data

AB1755 WRAMP Use Case

Identified data types:

- Invasive species
- Physical habitat
- Water and sediment chemistry
- Stream flow
- Storm hydrographs

Level 3 Committee

Mission to bring scientists together to share their data

- Vernal pool
- Sierra wet meadows
- Tidal wetlands
- Algal and benthic macroinvertebrates
- Perennial streams

Issue:

Monitoring protocols and data are not accessible

Compendium of Available Monitoring Protocols

Under development to provide available resources for effective monitoring of Level 1-2-3 data

Needed

- Identify monitoring protocols and available data
- Standardize monitoring protocols if needed
 - Standardize and share data on web tools
